## Flow meter M123

Measuring ranges 1.5 - 1,000 l/h

M123 PVDF

M123 PSU

M123 PVC

### FUNCTION

The M123 flow meter works on the float principle and is used to measure the flow rate in closed pipelines. The medium flows through the vertically installed flow meter from bottom to top. This raises the float and shows the current flow rate on the scale on the measuring device. The read-off edge corresponds to the largest diameter of the float.

The M123 flow meters have a water scale and 2 setpoint indicators as standard.

### SPECIAL FEATURES

- Fracture-proof and corrosion-resistant
- Radially removable
- Adhesive special scales, for liquid and gaseous media
- Holder for accessories (limit value contacts)
- Measuring tube carries the DN label, and also the measuring range and material
- PVDF floats and stops as standard
- Measuring ranges 1.5-1,000 l/h
- Less space required thanks to short overall length
- Operating pressure PN 10 at 20 °C

### MATERIALS

Measuring tube	Float	Insert, top and bottom	O-ring
PVC	PVDF	PVDF	EPDM (standard), FPM (optional)
PSU	PVDF	PVDF	EPDM (standard), FPM (optional)
PVDF	PVDF	PVDF	FPM (standard)

### CONNECTION POSSIBILITIES

Socket	Spigot	Plastic female thread	Metal female thread
PVC adhesive socket (standard)	PP fusion socket	PVC	Stainless steel V4A
PP fusion spigot	PVDF fusion spigot	PP	Malleable cast iron
PVDF fusion socket	PE fusion spigot	PVDF	

### PRESSURE LOSS

Measuring range l/h	1.5-15	2.5-25	5-50	10-100	8-80	15-150	20-200	15-150	30-300	50-500	100-1,000

**Special scales as requested by the customer**

Details required: Medium, spec. weight in g/cm<sup>3</sup>, viscosity in cP or mPas, operating temperature in °C, desired measuring range in l/h.

**Application instructions for special scales**

When applying special scales later, ensure that the marking ◀ on the scale corresponds with the one on the measuring tube.

**ACCESSORIES**

Limit value contact Z 40 min.

Limit value contact Z 42 max.

**INSTALLATION AND ASSEMBLY INSTRUCTIONS**

- Install the flow meter into the pipeline system vertically and without tension.
- Provide an inlet and outlet section  
Inlet approx. 10 x DN, outlet approx. 5 x DN.

**NOTES ON OPERATION**

- Avoid pressure surges, as these can damage the unit.
- Exercise caution when installing. The measuring tube must not come into contact with solvent.
- Before start-up, make sure that the connected parts are sufficiently tightened.
- The union nuts must not be mixed up on a measuring tube made from the material PVDF. The overall length also does not correspond to the dimensions table.

We reserve the right to make technical changes in the interest of improvement.

## Limit value contact Z 40 min./Z 42 max.

For float-type flow meters

M335/M350/M123/ M23 PVDF

### USE

The limit value contacts Z40 and Z42 are used for external monitoring of limited flow values on our (float-type) flow meters. They are pushed onto the guide rod located on the flow meter and can be adjusted to any desired value on the corresponding scale.

### FUNCTION

A solenoid installed in the float closes or opens a reed contact permanently cast in the limit value contact. The switching function is bistable. This means that the switching state is maintained even if the solenoid float moves away from the contact.

### SWITCHING STATES

	Float above	Float below
Z40 min	open	closed
Z42 max	closed	open

### Attention

When retrofitting the flow meter with limit value contacts, ensure that the standard float is replaced with a solenoid float. The solenoid float is clearly identified by an “M” on the top.

### ORDER NUMBERS

Z40 min. 17.100.686

Z42 max. 17.100.687

### TECHNICAL DATA

Switching voltage*	max. 230 V~
Switching rating*	max. 10 W/12 VA
Switching current*	max. 0.5 A
Contact resistance	< 200 mOhm
Leakage resistance	> 10 <sup>11</sup> Ohm
Permissible ambient temperature	0 to +55°C
Protection type	in ace. with DIN 40050-IP 65
Switching hysteresis	1-2 mm float travel

We reserve the right to make technical changes in the interest of improvement.

\* Even a brief overshoot is not permitted. This is uncontrollable with inductive or capacitive peaks, e.g. with contactors or solenoid valves. It is therefore recommended to use a limit value switch or a contact protection relay.
